Title:

Game console

Description:

Game console is a program made in C++ programming language. Game console contains multiple games which the user can select and play. The program consists of various games such as tic tac toe, guess the number, sudoku, etc.

This program uses C++ concepts such as classes, header files, saving scores, etc.

Key features:

1. User gets to select a game from given choices.
2. Tic tac toe contains a grid of 3x3 where each player gets to place X and O's and if there are placed vertically or diagonally or horizontally first, wins.
3. Program will generate a number and the user have to guess the number, during every try, the program will let the user know if the entered number is greater or lesser than the key number.
4. Sudoku is a game where there is a grid of 9x9, where a digit cannot be repeated in the same row or the sub grids of 3x3.
5. Each game is placed in their respective header files.
6. All the scores will be saved individually.
